Add your name at the kiosk

1

TO TIER 1 · PT. 1 · AFTER 5 SIM H — WITNESSED

Sim Flight

Log 5 hours in the simulator, then fly a checkride for a mentor. an orbit, a Split-S, gaps, and a finished race.

THE STANDARD
Only once the kiosk shows 5 h across the five flight sims (Ground School time does not count). Then a mentor watches you in Liftoff: a clean orbit around a gate, a Split-S, three gaps without a crash, and a finished race.
Practise first on the Pilot Path: Four channels, two sticks · Rate mode against angle mode · Hover Trainer · Throttle discipline

WHY Acro muscle memory where crashes cost nothing, then proof of real control. Sim-only, so it can gate the first real flight.

2

TO TIER 1 · PT. 2 — WITNESSED

Spotter

Do the short Spotter course and pass its quiz, then spot a real flight for a mentor: check the field, keep eyes on the aircraft and call hazards. Do it before anything else - you will spot for others long before you fly.

THE STANDARD
Quiz passed first (80 %). Then spot a real flight for a mentor: check the field before the battery goes in, keep eyes on the aircraft the whole battery, and call every person and obstacle before the pilot needs to know. The mentor checks the airspace; you check the field.

WHY FPV pilots can't see around themselves.

3

TO TIER 1 · PT. 3 — QUIZ

Safe Flight

Know and follow the Brophy FPV safe-flight rules.

3 LESSONS, THEN THE QUIZ
1. Who's flying, who's watching
2. The Brophy FPV rules sheet
3. Go / No-Go DRILL

10 questions · 80 % passes · no sign-off needed · retake any time

WHY The baseline code of conduct for real hardware.

4

TO TIER 1 · PT. 4 — QUIZ

Battery Care

Balance-charge, store at storage voltage, spot a puffed pack, explain disposal.

4 LESSONS, THEN THE QUIZ
1. LiPo basics
2. Battery math DRILL
3. Charging, storage and disposal
4. When a pack goes bad

10 questions · 80 % passes · no sign-off needed · retake any time

WHY LiPos are the biggest real fire risk in the hobby.

5

TO TIER 1 · PT. 5 — BENCH

Building

Rebuild a disassembled Meteor 75 Pro, with every prop on the right way round.

AT THE BENCH · 7 STEPS
Parts checklist › Motors on › Plug in the motors › Assemble it and put the canopy on › Plug in the canopy › Test › Props on the right way
Then a photo, submitted on the website · a mentor passes or fails it

WHY Members can fix what they break.

6

TO TIER 1 · PT. 6 — BENCH

Betaflight

Set motor direction and order, finish the OSD (battery usage and amp draw, positioned), set rates and the arm switch, and bind.

AT THE BENCH · 9 STEPS
Props OFF › Connect › Flash the practice config › Receiver › Modes › Motors › OSD › Check my work › Bind last
Practised on the club Meteor 75 Pro at the kiosk, which checks the result against a stock config.
Then a photo, submitted on the website · a mentor passes or fails it

WHY Most "won't fly" problems get solved here.

7

TO TIER 1 · PT. 7 — WITNESSED

Line of Sight

Without goggles: take off, hover and land a whoop in angle mode. Level flying only, supervised.

THE STANDARD
A mentor stands beside you: a controlled take-off to head height, a 20-second hover without drifting much, a lap around a tree, and a smooth landing.
Practise first on the Pilot Path: Which way is left? · Gate Run · Lost orientation recovery

WHY If video cuts out, the pilot can still level out and land - and it builds throttle control.

NEXT
Tier 1 checkpoint
TINY WHOOP · SHEET 2 →

FLIGHT · BUILD & TECH · KNOWLEDGE & SAFETY · CREW & LEADERSHIP

Quiz badges: pass at 80 %, no sign-off · **Bench** and **witnessed** badges: a mentor who holds the badge signs it off · demonstration, not attendance
